Getting started with  
the Massless Pen

1. Attach the Massless tracker to the underside of the tracker shelf and secure with the short screw. Ensure the USB socket is next to the hinge.

2. For Oculus, slide the camera into the Oculus bracket from the rear. Once in place push the VR pin through the hole and into the Oculus camera until flush.

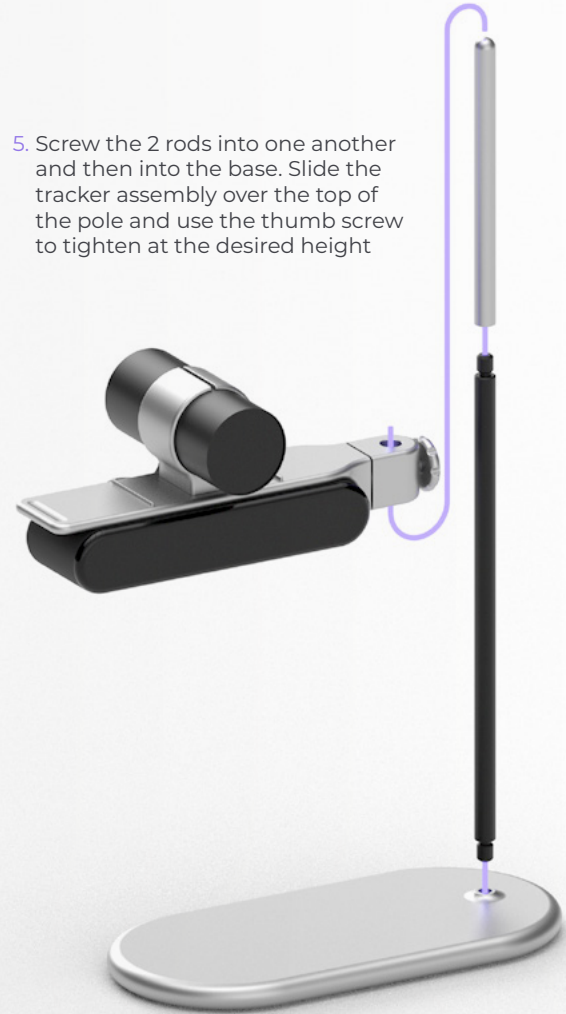

3. Use the long screw to attach the Oculus bracket to the tracker shelf.

4. For Vive, attach the lighthouse to the Tracker shelf using the long screw.

5. Screw the 2 rods into one another and then into the base. Slide the tracker assembly over the top of the pole and use the thumb screw to tighten at the desired height
